REASONS FOR ALLOWANCE

1. Claims 25-34 are allowed.
2. The following is an examiner's statement of reasons for allowance: Chung (US 2001/0034623) discloses the use of a hotel management system with a hotel server which is capable of managing hotel tasks and recording customer information with a card, a house card server which is used for payment processing, a plurality of card terminals for transacting payment associated with a card and a positional information server to manage employees. However Chung fails to disclose the use of tags which are attached to an article in the hotel, a plurality of proximity detectors which detect the tag and transmit the tag ID for positional information, the hotel server which is programmed to record relationships between a customer and the tag ID attached to an article belonging to a customer, and the positional information management server being programmed to receive, record, manage and supply the tag ID to specify the location of management based upon the tag and detector ID, the positional information management server being programmed to search for the location of the article in response to reading of a house card and to send the response of the search to the card terminal reading the house card. Ulrich (6,825,763) discloses the use of tag IDs, and detector IDs where the information is sent to a positional information server. However fails to disclose the positional information management server being programmed to receive, record, manage and supply the tag ID to specify the location of management based upon the tag and detector ID, the positional information management server being programmed to search for the location of the article in response to reading of a house card and to send the response of the search to the card terminal reading the house card. Baker et al. (Corrections Today, News Article, July 2001)

discloses the use of biometric and smart card tracking of inmates, however fails to disclose the use of a positional information management server which is programmed to receive, record, manage and supply tag IDs which are attached to an article associated with a customer and to specify the location of management based upon the tag and detector ID, the positional information management server being programmed to search for the location of the article in response to reading of a house card and to send the response of the search to the card terminal reading the house card. Therefore a positional information management system with a tag attached to an article in a hotel, a plurality of proximity detectors, and a computer network comprising a hotel server, a house card server, a plurality of card terminals, and a positional information management system which is programmed to receive, record, manage and supply tag IDs detected and detector IDs to specify a location of an article based upon the detection of the tag ID and detector ID, and being programmed to search for the location of the article in response to reading of a house card and to send the response of the search to the card terminal (which reads a house card, identifies a customer, transacts payment for hotel services and for input of a tag ID) that is reading the house card is not anticipated nor rendered obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
